## Summary

I am a passionate and motivated Master of Computer Applications (MCA) student at SRM Valliammai Engineering College with a strong interest in software development and data visualization. I enjoy applying my technical and analytical skills to build creative and efficient solutions using technologies like Python and SQL. My academic projects reflect this passion — from developing a task-based visualization system that helps academic institutions track student performance using Streamlit, to creating a Python-based paint application that encourages creativity and design thinking. I am constantly eager to learn new tools, explore emerging technologies, and contribute to innovative IT projects that make a real-world impact. I believe in teamwork, continuous growth, and using technology to solve meaningful problems. I am open to opportunities in software development, data analytics, and related IT fields where I can continue to grow and make a difference.
